

Overview:

My website is going to try to help give ideas for characters that are missing things like motivations or limitations, or to help them create one entirely from scratch.

Target audience:

My target audience is anyone who loves to create characters, or anyone who needs a good laugh.

Major functions:

1. Pick traits from a list
2. Generate character documents
3. Save favorite characters
4. Share characters on social media
5. Edit saved characters
6. Upload or draw pictures to go with characters
7. Place to write backstories
8. View other users creations
9. Remove characters

External data:

I need to store information about the characters, and I'll use a random image from that one website to use as placeholders for people's characters. Another API I need to use is document generation so people can save characters to their computer. I need to have a social media sharing API as well.

Modules:

- Drawing application
- Saving, editing, deleting
- Random traits generation

- Document generation

Graphic identity:

Softer pastel colors, pink, orange, blue. The fonts will be a little looser and more creative. The icon could be a book with a smiley in it.

Timeline

Week 5:

- Trait generation
- Document generation
- Save and edit characters

Week 6:

- Remove characters
- Drawing place
- Backstory

Week 7:

- Other users
- Uploading images

Project Planning:

<https://trello.com/b/jlq0q6dn/character-addition>

Challenges:

Making an other users function, uploading images, and having a place where people can draw
